

Recycling for mosquito netting

Our class is raising money for a program called “Spread the net.” Spread the net helps African people from getting malaria by giving them a mosquito net. Every 30 seconds a kid dies from malaria. By raising this money we are helping other kids in poor countries from dying.

Our class raised \$200.00 from September to April for our recycling and we have bought 20 mosquito nets for Africans. Our school has an Awards Day in April 2009 and we gave the whole school a report on how much money our recycling has raised and how many mosquito nets we bought. Our school was very proud of the recycling our class has done.

We have an article in our Native newspaper that says “haahuupayuk Changes the World”.

We even had our picture in the paper.

Here are some pictures of how we do it.

1. Put on gloves, get the garbage bags.

2. We pick up the recycling from the classrooms.

3. We take it to the recycling room.

4. We sort the recycling.

All of the money that we raised is going to African kids.

5. All of the money we had raised went to African kids. We are putting stuff in the bins.

I feel proud of myself and my class mates. We have done lots of work to help African kids.
